

ELIJAH BROWN

Senior Machine Learning Engineer | Autonomous Systems Enthusiast

+1-(234)-555-1234 Email [linkedin.com](#) Phoenix, Arizona Extra Field

SUMMARY

With 10 years in machine learning, I excel in building real-time, low-latency services, utilizing TensorFlow, and driving autonomous solution growth. Built a system that improved ad efficiency by 35%.

SKILLS

Machine Learning, Deep Learning, Python, TensorFlow, Real-time Systems, Autonomous Systems

EXPERIENCE

Senior Machine Learning Engineer

Mountain View, CA

Google

06/2018 - Present

- Led a team of 3 engineers to develop a real-time machine learning system processing over 200 million ad events daily.
- Architected low-latency machine learning solutions, improving ad response times by 20% while maintaining accuracy and reliability.
- Collaborated with cross-functional teams to innovate autonomous advertising solutions, achieving a 35% improvement in campaign efficiency.
- Developed end-to-end systems from design to implementation, scaling services to handle an increase of 50% in load capacity.
- Mentored junior team members and fostered an environment of collaboration, leading to improved project delivery timelines.
- Optimized machine learning models, resulting in a 25% reduction in computational resource usage without sacrificing model performance.

Machine Learning Engineer

Seattle, WA

Amazon

05/2015 - 05/2018

- Developed personalization and recommendation models that led to a 40% increase in user engagement for Amazon Ad services.
- Engineered scalable machine learning pipelines using TensorFlow, processing over 100 terabytes of data monthly.
- Collaborated with data scientists and engineers to troubleshoot and enhance models, improving prediction accuracy by 15%.
- Managed production-ready codebases, ensuring system reliability and maintenance, resulting in a downtime reduction of 30%.
- Interfaced directly with business and technical stakeholders to align machine learning strategies with overall business goals.

Data Scientist

San Jose, CA

Adobe

03/2013 - 04/2015

- Applied deep learning architectures to innovate ad targeting strategies, boosting campaign performance by 25%.
- Constructed and implemented machine learning models for online ad platforms, optimizing user reach and relevance.
- Collaboratively enhanced model accuracy through cross-team knowledge exchange, superior data insights, and experimentation.
- Streamlined production workflows, reducing model deployment times by 40% and increasing model update frequency.

EDUCATION

Master of Science in Computer Science

Stanford, CA

Stanford University

01/2010 - 01/2012

Bachelor of Science in Computer Engineering

Tempe, AZ

Arizona State University

01/2006 - 01/2010

PROJECTS

AdTech ML Pipeline

Developed a pipeline for ad targeting optimization, improving accuracy using TensorFlow. See more: [github.com/adtech-ml-pipeline](#)

Realtime ML Engine

Designed a real-time engine to process streaming data for enhanced ad personalization performance. See more: [github.com/realtime-ml-engine](#)

KEY ACHIEVEMENTS

Improved Model Efficiency

Refined machine learning models, reducing production costs by 20% through enhanced optimization techniques.

Best Innovator Award

Received at Google, recognized for developing a system improving ad decision-making speeds by 50%.

Keynote Speaker at ML Summit

Presented breakthrough ad-tech ML techniques and their impact on digital advertising efficiency.
